

Who are we?

Healesville Community Renewable Energy Inc (Healesville CoRE) is a voluntary community group passionate about community engagement, solar energy, reducing energy consumption and supporting everyone in Healesville to access clean renewable energy at the most affordable price.

What is our mission?

Our visionary project is to transition Healesville into a Net Zero carbon town within ten years of our formation - by 2027. We won't do this alone, but together with the whole community.

How can you get involved?

We can't do this alone, we need your help! We are always on the lookout for volunteers and new members to join us on this journey and donations to keep us going. All details can be found on our website. We need your support and would love to hear from you! Get in touch with us.

Proudly supported by the following organisations

Transitioning Healesville to Clean Energy

Healesville
CoRE

**Our vision is to create a
Zero-Carbon Town by 2027**

Affordable clean energy to empower our community

Community Energy is about communities taking control of their energy production, storage, consumption and distribution in transitioning towards a Net Zero town.

Healesville CoRE will support the community to source the technical expertise, contracts, finance and business structures for everyone to benefit from these great renewable energy initiatives.

IMAGINE a visionary future for Healesville where:

- Solar energy is produced on the roofs of most houses and businesses
- Energy is stored in batteries
- A community solar farm with a community battery produces and stores energy for those who can't install solar
- A Microgrid links our community through our own energy retailer
- We produce all the electrical energy Healesville needs

IMAGINE paying our bills through a community retailer based in Healesville which will keep more money in the community and enable us to distribute a portion of the profits to community groups and people in need.

IMAGINE sharing our community-produced power with each other before feeding it back into the main grid and knowing that our power supply is more secure during black outs and bushfire emergencies.

Healesville CoRE is engaging with our community so everyone can make informed choices about renewable energy and can embrace these creative changes by working together. We aim to achieve cheaper power bills, keep money closer to home, provide local jobs and build connections within our community.

Our longer term aim is to enable Healesville to produce more energy than we consume and to become a model for other small towns in the Yarra Valley and beyond. Eventually we will set up an Information Hub for other groups to access information and inspiration for their own community renewable energy projects.

It's time to unleash the power of communities to address local energy needs.
